

Project Report: HDFC Bank Card Usage Dashboard

Project Overview:

I undertook a personal project to create a comprehensive HDFC Bank Card Usage Dashboard. The goal was to analyze the performance of credit and debit cards, offering valuable insights for decision-making, benchmarking, and industry positioning.

Key Deliverables:

- **User-Friendly Dashboard:** I designed and developed an interactive dashboard for evaluating HDFC Bank's credit and debit card performance. The dashboard ensures easy navigation and data exploration.
- **Data Transformation:** I organized and cleaned various data sources to ensure accuracy. I resolved merged cells, eliminated irrelevant data, and aggregated transaction data for meaningful analysis.
- **Dynamic Filters:** Implemented dynamic filters that allow users to customize their analysis by selecting card type (credit or debit), specific banks, and months. This feature enhances usability and flexibility.
- **Performance Insights:** The dashboard provides an overview of market share and presents trends in key performance indicators (KPIs). This empowers leaders to assess product performance, customer behavior, and compare with industry peers.

Reported Benefits:

- **Informed Decision-Making:** The dashboard equips decision-makers with data-driven insights, facilitating informed choices to enhance the bank's competitiveness and strategic direction.
- **Strategic Planning:** By evaluating market share, KPIs, and competitor performance, leadership gains the tools needed for effective strategic planning and market positioning.
- **Benchmarking:** The dashboard enables direct comparison of HDFC Bank's card performance with industry peers, enabling identification of strengths and areas for improvement.

Conclusion:

The self-developed HDFC Bank Card Usage Dashboard serves as a powerful tool for analyzing credit and debit card performance. It offers an intuitive interface, accurate insights, and practical filtering options. This project showcases my skills in data analysis, visualization, and independent project development, underlining my ability to provide actionable solutions aligned with business objectives.
